Digital admissions and commerce platform

A five-week proposal for a premium responsive website, enquiries, free resources, physical books, library applications, promotions, analytics and staff operations.

PROJECT INVESTMENT

₹39,500

Target delivery: five weeks from project commencement

Subject to timely content, account access, consolidated approvals and payment-provider verification.

The proposed outcome

The project will turn the current website into a connected platform that helps prospective students understand ICT's programmes, trust the institute, take the right next step, and receive a timely response.

ICT staff will receive a focused admin dashboard for enquiries, resources, books, orders, library applications and promotions. Routine updates will not require developer involvement.

Designed across devices

The platform will be designed and tested as a responsive system for mobile phones, iPad and other tablets, laptops, and large desktop displays. Tablet layouts will receive dedicated treatment rather than appearing as stretched mobile or compressed desktop screens.

Included public experience

- Premium responsive visual direction using approved ICT content and brand assets.
- Homepage, institute and faculty content, course catalogue and course details, verified results and success stories, resources, books, cart, checkout, library, contact and required policy pages.
- Clear calls to action for course enquiries, calls, WhatsApp, Telegram, resource access, book purchases and library applications.
- Accessible navigation and forms, fast loading, low-bandwidth consideration, touch and keyboard support.

Included operational modules

Enquiries and staff workflow

- Lead capture with course, campaign and source attribution.
- Lead stages, staff assignment, notes, next follow-up, call/WhatsApp shortcuts, filters and CSV export.
- Duplicate detection and an activity history for significant changes.

Free resources

- Searchable resource catalogue with approved categories.
- Name, phone/email and consent capture where required, followed by immediate access.
- Fast Cloudflare R2 delivery and admin-controlled metadata.

Physical books

- Book catalogue, details, availability, cart, address collection and order summary.
- Razorpay Standard Checkout with server-verified amount, stock, signature and payment status.
- Paid, packing, shipped, delivered, cancelled and refunded staff workflow.
- Customer-facing success, pending, failure and retry states.

Library applications

- Approved facilities, plans, rules and timings with an application flow.
- Admin review and status management. Online library payment is excluded from this phase.

Promotions, analytics and search

Promotion system

- Admin-controlled announcement bar, inline campaign cards and one restrained modal placement.
- Route targeting, schedule, expiry, priority, call to action, publish state and dismissal rules.
- Campaign analytics for views, clicks, enquiries and attributable orders.

PostHog owner dashboard

- Visitors and leading entry pages.
- Course enquiry, resource unlock and book purchase funnels.
- WhatsApp handoffs, library applications and campaign results.
- Consent-aware, sampled session replay with sensitive forms and admin surfaces masked.

PostHog is used for aggregate analysis. Named leads, applications and orders remain in the protected admin dashboard.

Search foundation

- Unique metadata, canonical URLs, sitemap, robots rules and supported structured data.
- Crawlable course, resource and book information with intentional internal linking.
- Google Search Console connection and indexing checks.
- Google Business Profile audit and consistency handoff checklist.

Ongoing profile publishing, reviews, local citations and competitive content are a separate growth service. No fixed Google position is guaranteed.

Five-week delivery plan

Week 1 — direction and scope

Requirements freeze, content audit, information architecture, main journeys, visual direction and approval.

Week 2 — public platform

Courses, enquiries, resources and the responsive layout system.

Week 3 — commerce and library

Book catalogue, cart, checkout, order states and library applications.

Week 4 — operations and promotions

Admin workflows, lead handling, order fulfilment, promotions and analytics.

Week 5 — qualification and launch

SEO, approved content entry, responsive and accessibility verification, payment testing, training and production release.

Consolidated client feedback is requested within two business days at each approval point. Delayed content, access or approval moves the target date by the corresponding delay.

Commercial terms

Milestone	Amount	Trigger
Project commencement	₹19,750 (50%)	Scope acceptance and production slot reservation
Working preview	₹11,850 (30%)	Public experience and admin preview available
Production acceptance	₹7,900 (20%)	Approved launch and handoff

Included handoff

- Production deployment, domain connection and separate development and production environments.
- Initial population of the existing course catalogue, up to 20 books and up to 30 resources using complete client-supplied data.
- One recorded staff training session and written operational guidance.
- Thirty days of post-launch defect support.

Revision and change control

Two consolidated revision rounds are included at each design approval stage. Requests outside the approved scope will be documented with their price and timeline effect and will begin only after written approval.

Client-owned services

Production accounts for the domain, Cloudflare, Convex, Clerk, PostHog, Razorpay, Google Search Console and Google Business Profile will be owned by ICT. Third-party subscriptions, transaction charges, messaging charges and taxes are paid directly by ICT.

Exclusions and responsibilities

Not included in this phase

- Guaranteed Google rankings or ongoing local SEO operations.
- AI assistant, automated WhatsApp replies or WhatsApp Business API charges.
- Online library payment, student accounts, LMS, tests, attendance, live classes or Classplus migration.
- Digital paid-book delivery, courier procurement, packaging, dispatch or accounting integration.
- Photography, videography, full copywriting, brand identity work, unlimited content entry or unlimited revisions.

ICT responsibilities

ICT will provide and approve its official name, address, hours, contacts, programme information, fees, schedules, faculty information, results evidence and permissions, resource files, book details and covers, stock, delivery charges, library rules, legal policies, payment account and responsible staff contacts.

The project begins after written acceptance, the first payment, and receipt of the starting content and account-access checklist. This quotation is valid for 15 days.

Future opportunity

The platform will remain ready for a separately scoped enquiry and staff-reply assistant. Any later proposal will be based on ICT's approved knowledge, real language patterns, accuracy evaluation and staff escalation process.
